

The screenshot shows the 'Sales' form in the TAB Accounts application. A modal window is open, allowing users to enter contact and billing details. The modal is divided into several sections:

- Bank Information:** Fields for 'Enter bank account number', 'Enter bank IFSC', and 'Enter bank name & branch'.
- Contact & Status:** Fields for 'Phone *', 'Email *', and 'Credit Period (days)'. There is also a toggle switch for 'Enable VAT'.
- Billing Address:** Fields for 'Name' and 'Phone'.
- Shipping Addresses:** A section with a checkbox for 'Apply Billing to First Shipping' and a '+ Add More' button. Below this, it says 'No shipping addresses added.' with a 'Click here to add one' button.

The background shows the 'Sales' sidebar menu with options like Quotation, Sales Order, Delivery Challan, Invoice, Payment, and Sales Return. The top right shows the user's name 'Hi, James Corcoran!'.

Changed GST to VAT.

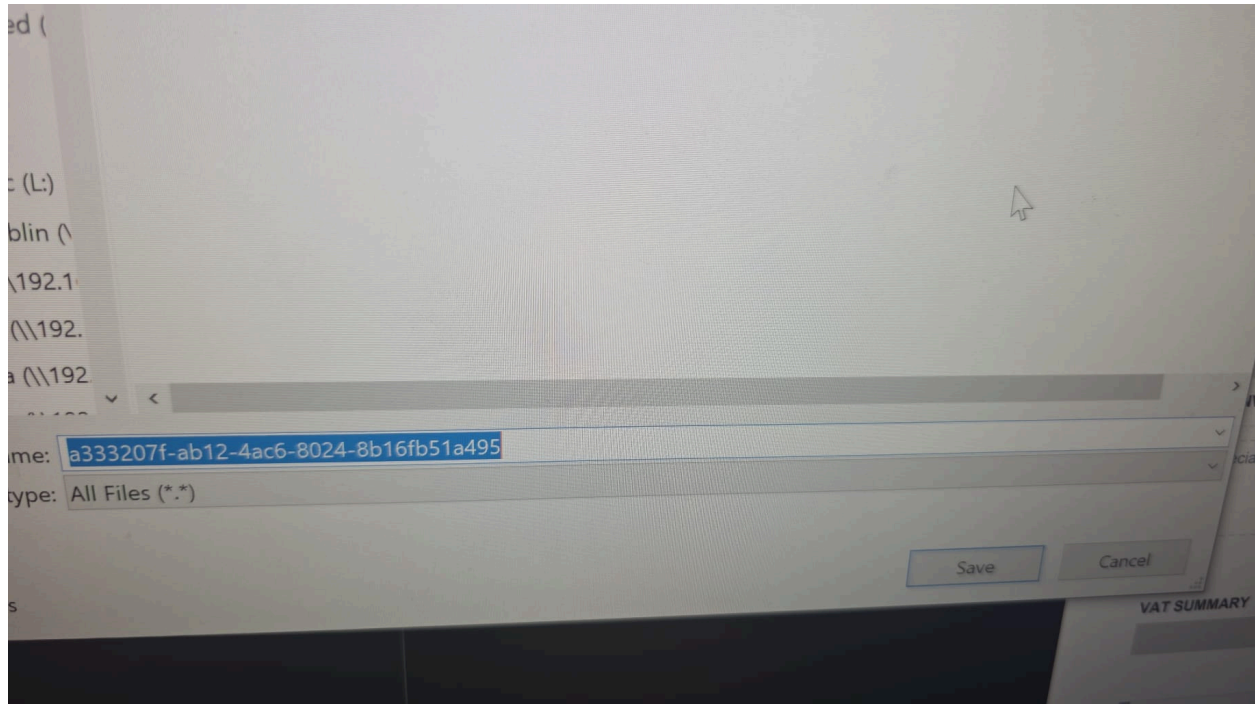

The screenshot shows the 'Business & VAT Settings' page in the TAB Accounts application. The page is divided into two main sections:

- Business & VAT Settings:** This section includes fields for 'Base Currency' (set to 'Euro (EUR €) (EUR)'), 'Default Company VAT Rate' (set to 'No VAT (0%)'), and 'VAT Registration Number' (with a placeholder 'e.g. IE1234567T / GB123456789'). There is also a checkbox for 'Registered for VAT'.
- Bank & Settlement Details:** This section includes fields for 'Bank Name' (set to 'REVOLUT'), 'Account Name / Holder' (with a placeholder 'Enter account holder name'), and 'Account Number'.

The page also includes a sidebar menu with options like 'Report' and a top right area with the user's name 'Hi, James Corcoran!'.

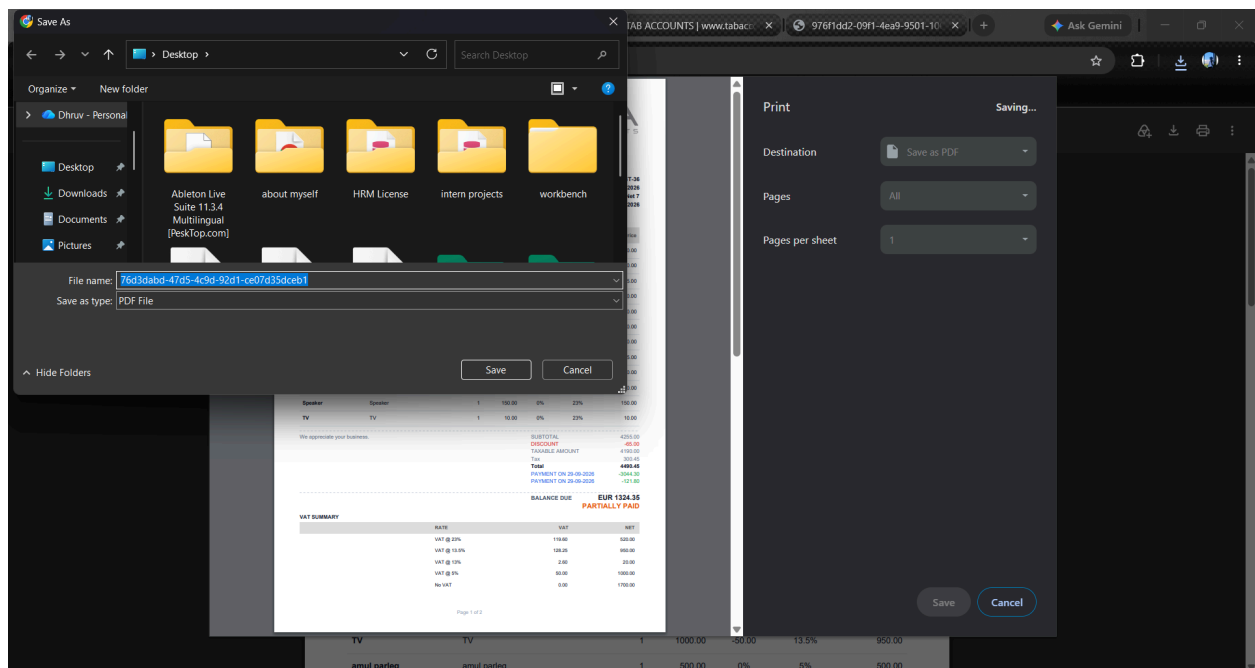

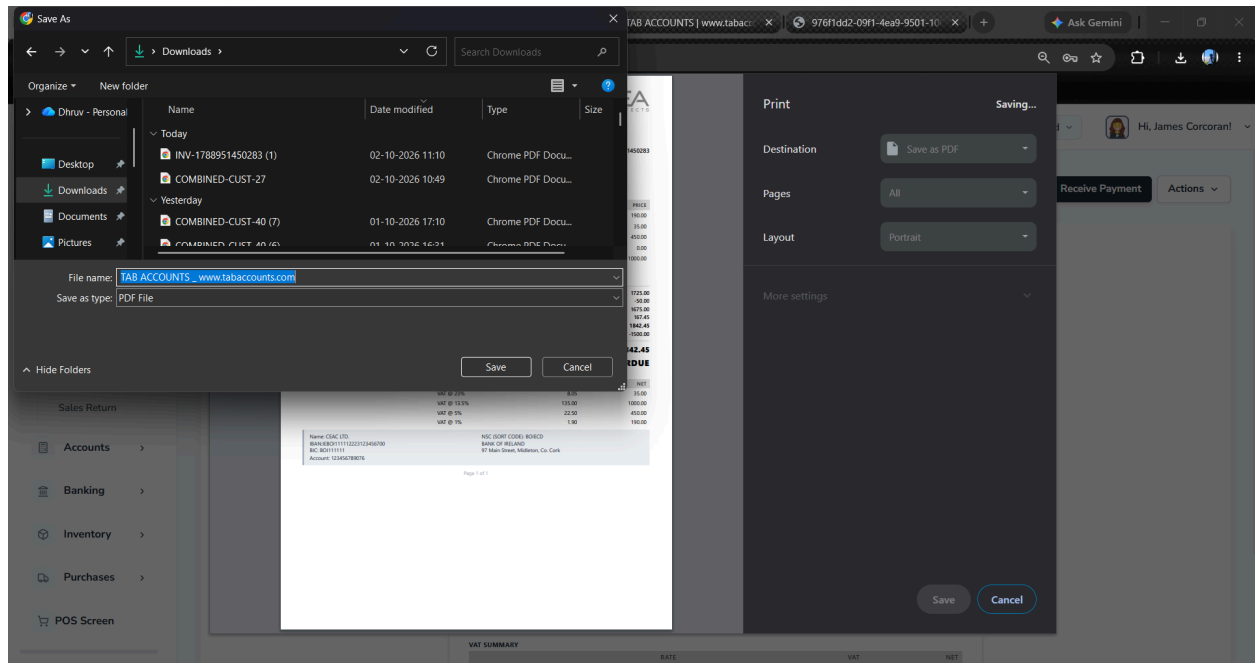

You are asking why here the VAT number is empty in the company info in the settings ?

Because earlier it was necessary to have the VAT id to be shown but now it is resolved properly. If the VAT field is left blank, the VAT ID will not appear on the invoice.

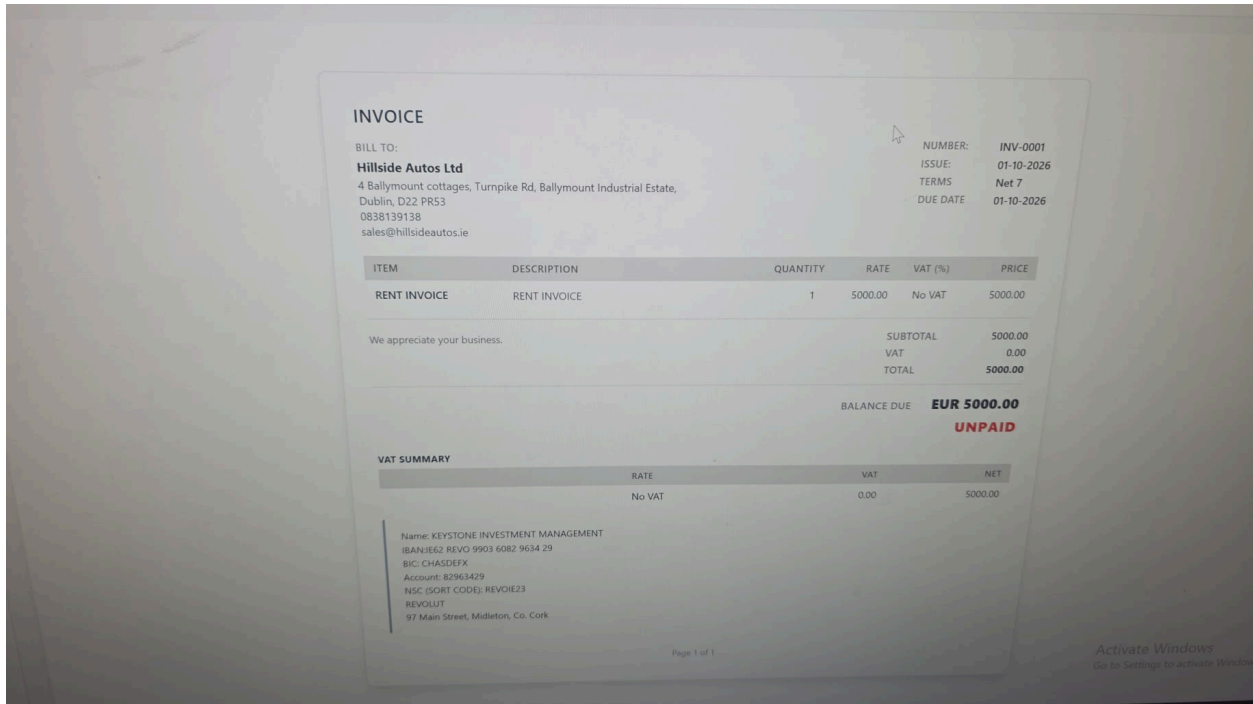

Regarding your question about why the files are being saved with random numbers:

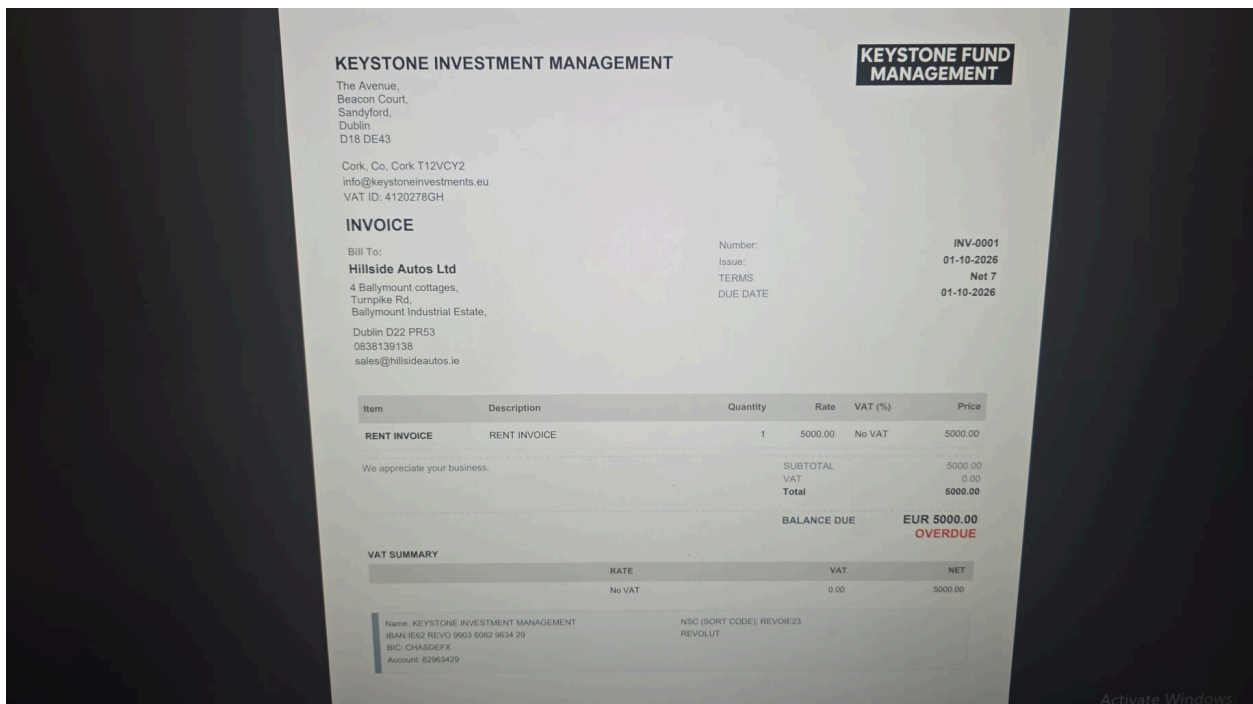

When you print or save a document, it saves using a default random ID because the print/save function does not automatically pull information such as the invoice number or customer name. As a result, you will need to manually adjust and save the file using your preferred naming format.

Like you can see, when I am going to save the invoice from the print option then it will save with the random details or numbers you have to make sure to save the invoice with the name or number you want it to look alike.

Now the address in the bottom will display correctly and the address displayed in the bottom is the company's address.

Now this issue got resolved and from now onwards in the left hand side all the bank details are gonna be saved and in the right hand side the address of the company is going to be saved. Now the changes have been done properly. You can check it.
